Hi Everyone,

Continuing Education News:
The LVMA office and program committees have put together a great program for this year’s Winter Meeting slated for January 29-31, 2016 at the Hilton Hotel and Shreveport Convention Center. Registration opens soon. See this link for more information: http://lvma.org/LVMA/Education/LVMA_Winter_Meeting.aspx and look for the brochure to arrive ASAP.

Also on the CE front, I hope you were able to make it to the Southwest Veterinary Symposium in Fort Worth this year. The conference is a favorite of mine for many reasons and I enjoyed seeing many of you there. Partnership in this conference helps to keep our association strong as a source of education, networking, and revenue.

LVMA Advocacy at Work:
The LVMA has been actively engaged on many issues this year, including access to compounded medications for office use. As an update, the Board of Pharmacy renewed the emergency rule which permits use of such medications by veterinarians. Representatives from the LVMA attended a public hearing last month in support of permanent rule change. The full Board of Pharmacy will consider the matter for permanent rule change in mid-November.

On a national level, the AVMA is actively engaged in advocacy for clear and practical rules governing veterinary compounded medicines. Check out the AVMA’s letter to the FDA addressing the draft guidance on Compounding Animal Drugs from Bulk Drug Substances: http://tinyurl.com/nuub57.

We sent notice to every member of our federal legislative delegation voicing opposition to the so called “FAIRNESS” TO PET OWNERS ACT. This misguided legislation pits chain pharmacies against veterinarians and pet owners under the guise of consumer fairness. In our opposition letter, we noted the following:

1. The high cost of medications has little to do with consumer access and retail mark-up, but rather is driven by drug shortages resulting from drug manufacturing and quality problems, delays, and discontinuations. The FDA maintains a drug shortage database at: (http://www.fda.gov/Drugs/DrugSafety/DrugShortages/).

2. Veterinarians are trained in animal drug safety and prescribing. Pharmacists often lack important knowledge of species differences which adds risk in error, injury and death. Veterinarians know the medications they are prescribing. Specific examples of such errors could be helpful in this effort. Details may be sent to me or your LVMA district representative.

3. Veterinarians know that providing medications at the veterinary clinic increases compliance, saves pet owner’s time and money, and ultimately enhances the health and livelihood of the animals we treat. Lack of compliance results in substantial morbidity and mortality and ultimately translates into higher health care costs. Convenience and client education matter and the veterinary office is the only place where these key health determinants are delivered together.

4. Adding an additional layer of regulation to veterinary prescribing is unnecessary. In LOUISIANA, the veterinary practice act already states: “A client is not obligated to purchase a prescription medication from the prescribing veterinarian.” Other states have similar laws or policies.

I encourage all veterinarians to contact their congressional legislators on this issue. The AVMA makes this easy here: http://tinyurl.com/njfqJn2.

Your membership strengthens our association and is valued and appreciated. Please contact me if I can answer any questions or be of other assistance.

Sincerely,

Kirk Ryan
LVMA President
SOUTHERN VETERINARY EYE CARE OFFERS A WIDE RANGE OF MEDICAL AND SURGICAL THERAPIES TO HELP IMPROVE VISION AND COMFORT:

- Micro-incision cataract surgery with artificial lens implantation
- Corneal repair and reconstruction
- Eyelid and nasolacrimal repair and reconstruction (Entropion, Ectropion, Medial Canthal Closure)
- Lid mass removal
- Glaucoma surgical and medical management
- Dry eye surgical (Parotid Duct Transposition) and medical management
- Prolapsed gland of the third eyelid repair (Cherry Eye)
- Intra-ocular prosthesis surgery
- Enucleation (eye removal) with intra-orbital implant
- Medical therapy for inflammatory and infectious eye diseases
- Emergency eye care 24 hours a day and 7 days a week
- Breed eye certifications
- Full Ophthalmic Examinations (Slit Lamp Bio-Microscopy, Retinal Exam) with diagnostic testing (Intraocular Pressure Measurement, Tear Testing, Fluorescein Staining)
- Gonioscopy (Diagnosing the Potential for Glaucoma Susceptibility)
- Retinal testing (Electroretinography)
- Ocular ultrasound

Q: What costs $500 and is a “must have” for every veterinarian in Louisiana?

A: A ticket to the Sixth Annual Mike Strain Fall Ball, Old Governor’s Mansion, Thursday October 15, 2015, 7:00 pm to 10:00 pm! Commissioner Mike Strain, DVM, is a tireless protector of and advocate for veterinarians and organized veterinary medicine and, by being so, is an equally great champion of animals and their owners. Veterinarians are fortunate to have him in office. Although I have never been a particularly active contributor to political campaigns, Dr. Strain’s Fall Ball has been an annual event for me for several years. I hope to see you there. Even if you have missed the RSVP date, I have it on good authority that the Committee to Elect Mike Strain would be delighted to accept a check at the door from unannounced drop-ins!

Nominations are now being sought for LVMA awards and nomination forms are in this Newsletter. Each year the LVMA recognizes and honors people that have made important contributions to veterinary medicine, the veterinary community and/or animal health, as well as an animal that has distinguished itself in a special way. Don’t miss this opportunity to nominate someone you believe is worthy of consideration. Please be neither bashful nor humble and nominate a person or animal today!

Plan now to attend the LVMA Winter Meeting in Shreveport, January 29-31, 2016! Drs. John Mauterer, Dale Peyroux and Kirk Ryan and the entire committee have been hard at work lining up excellent programming. Back by popular demand and high attendance will be Friday evening programming featuring resident CE-celebrity Dr. John Mauterer. Topics will be many and varied, including airway, nasal and respiratory disorders; marketing and creation of practice value; use of the web and social media; hematology; dentistry; GI disease; and much more! The LVMA Winter Meeting is always the premier annual event for Louisiana veterinarians to gather together for continuing education, business and social discussion, and encounters with veterinary industry vendors in a relaxed but professional environment. Mark your calendars now for this important meeting!

Stay well and stay connected!

SEE YOU AT THE BALL ON OCTOBER 15th.....

Healing hands with a passion for paws
Thoracic radiography is essential in the workup of many disease processes and lesion detection can be critical for successful patient treatment and outcome. Thoracic evaluation presents unique challenges to the interpreter due in large part to the lungs and their high susceptibility for artifact and non-pathologic processes mimicking disease. In the normal state, the lungs are predominately radiolucent owing to the widespread gas-filled airspaces. These airspaces begin at the lung hilum where the mainstem bronchi bifurcate and terminate distally in the microscopic alveoli. The interstitial compartment is composed of an organized network of connective tissue and both blood and lymphatic vessels. In conjunction with the airway walls, the lung interstitium is responsible for the lung radiopacity.

Why is lung evaluation so challenging?

There are multiple physiologic and artifactual causes of increased lung radiopacity that hamper lung evaluation and lead the interpreter down the erroneous path of disease:

- Radiographic underexposure or improper film development in traditional analog screen/film systems
- Enhanced interstitial lung markings and contrast due to digital processing algorithms that are unique to each digital radiographic system
- Summation of extrathoracic, mediastinal or pleural soft tissues with the lungs
- Age-related lung fibrosis and mineralized airways ("old dog lung") and patient obesity
- Poor lung inflation during expiration and atelectasis resulting from extended recumbency and/or anesthesia

Atelectasis is defined as a reduction in lung volume and gas content due to deflation of the alveoli. When the patient is in lateral recumbency, atelectasis and hypostatic congestion occur in the dependent (down) lung. These physiologic changes increase lung radiopacity and silhouette with soft tissue infiltrates preventing their detection. The aerated lung that is visible on the radiograph mainly represents the non-dependent (up) lung. For this reason, both lateral views are advocated to thoroughly evaluate the left and right lung (see Figure 1).

Two-view vs. three-view studies

Two-view thoracic studies are standard protocol in most veterinary practices and typically consist of orthogonal views: right lateral or left lateral combined with ventrodorsal or dorsoventral. Orthogonal views of the thorax should be obtained to overcome the limitation of projecting a 3-dimensional body cavity onto a two-dimensional film/display. This enables us to spatially localize lesions outside or inside the thoracic cavity and further isolate them into their respective organ or thoracic space (e.g. mediastinal, pleural). These views are also necessary to determine if lung infiltrates are unilateral or bilateral and to characterize their distribution (e.g. diffuse, cranioventral, caudoventral, perihilar and caudodorsal). Evaluation of ventrally-distributed lung infiltrates, such as those commonly seen with bronchopneumonia, is limited on the ventrodorsal view alone due to summation with the mediastinal structures. A three-view study combines the aforementioned benefits of orthogonal views with complete bilateral assessment of the lungs to increase detection rate and reduce interpreter error.

Far too often, I have interpreted cases where an additional thoracic view is required for accurate diagnosis potentially impacting patient care. It is impractical to rely on real time assessment of the radiographic study prior to removing the patient from the radiology suite to determine if additional views are necessary. With the patient already on the table, there are no inherent additional costs of the equipment in digital radiography and nominal additional technician time to position the patient in opposite lateral recumbency to acquire the third image.

In the interest of best practice, I have implemented a three-view standard thoracic protocol and I encourage you to incorporate this protocol in your practice as well.
WALTER J. ERNST, JR. VETERINARY MEMORIAL FOUNDATION
thanks the following contributors

Thanks to the following people, clinics, and all past contributors, the Dr. Walter J. Ernst, Jr. Veterinary Memorial Foundation continues to grow. Your continued support will help the Foundation to reach new heights. Please consider a contribution today and encourage your clients to participate in our memorial program.

2015 AWARDS NOMINATION FORM

2015 RALPH C. COOPER
VETERINARIAN OF THE YEAR

The Ralph C. Cooper Veterinarian of the Year Award is given annually to the person who is recognized by his or her colleagues as having given the most of themselves in time, energy, and ideas to the veterinary profession in the state of Louisiana.

Nominee Information:

Name _____________________________

Address __________________________

City ____________________________ State ______ Zip ______

Office Phone _______________________

Year of Graduation __________________

Veterinary School _____________________

Specialty or area of practice ____________

Local, state and national committees served on and positions held:

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

Describe nominee participation in promoting animal health and welfare:

________________________________________________________________________

________________________________________________________________________

Describe any other activity which should make this individual a good candidate for the Veterinarian of the Year:

________________________________________________________________________

________________________________________________________________________

Criteria for Nomination:

1. Nominee must be a member in good standing in the LVMA.
2. Nominee must have had a positive influence in promoting animal health and welfare in the community as well as within the profession.
3. Nominee should be of good character and well respected by colleagues.
4. Nominee should be presently or previously active in local, state, and/or national veterinary associations.
5. Nominee should have shown an outstanding contribution to organized veterinary medicine either through their work or through their actions and public awareness.
6. Current LVMA Board members are not eligible for nomination.

2015 DR. EVERETT D. BESCH
SERVICE AWARD

This award was formerly the LVMA Service Award. It is awarded annually to persons in recognition of outstanding service to the community and to the veterinary profession.

Nominee Information:

Name _____________________________

Employer ___________________________

Address ____________________________

City ____________________________ State ______ Zip ______

Office Phone _______________________

Describe an outstanding contribution to the community (if nominee is a veterinarian):

Eye Center for Animals

Offering Comprehensive Animal Eye Care

- Now offering Cataract procedures with our new Whitestar Signature System, the most advanced machine for Phacoemulsification from AMO, the leader in phaco technology. This groundbreaking system significantly reduces surgery time & post-op inflammation.
- Vitreoretinal Surgery with an Alcon Accurus, Biom, 12 & 24 MHz Ultrasound, and Both Argon & Diode Lasers.
- Intraocular Lens Implantation for 20 years; First to implant the 1st foldable Hydrophobic Siflex lens with UV Filtering.
- Retinal Surgery with multiple laser options.
- Glaucoma Shunt Surgery.
- A pioneer in Endolaser, a game-changer for glaucoma surgery without shunts or when shunts fail.
- Diamond Burr Debridement for persistent erosions.
- Radiofrequency Incision, Cautery, & Shielded Electroepilation for difficult distachia cases.
- Generator & Battery back-up ensures no down-time during Intraocular Surgery.
- Conservative surgeon, Corneal Grafts only if necessary.

American College of Veterinary Ophthalmologists (Diplomat of)

Paul da Costa, DVM, DACVO
524 Moss Street | New Orleans

www.eyecenterforanimals.com
We are very pleased to announce the addition of Dr. Jorge Vila to the MedVet team. Dr. Vila provides referral consults and a full array of cardiology procedures from MedVet’s Mandeville and New Orleans hospitals.

“We are proud to respond to the community’s needs for Cardiology support and excited to add the talent and enthusiasm of Dr. Vila to our Gulf Coast team.”

David Kergosien, DVM, MS, DACVS
Regional Medical Director, Gulf Coast
Case Report from the LSU Veterinary Teaching Hospital

Signalment and History

“Adison”, an 8 year old female spayed Yorkshire terrier (Figure 1), presented for evaluation of regurgitation. Clinical signs gradually developed around 1 week after ovariohysterectomy due to pyometra. Addison’s pyometra had resulted in sepsis and clinical hypoglycemia, but this responded to standard management. She discharged in good condition with a normal appetite and appeared normal at home until the onset of regurgitation.

Clinical Evaluation

General physical examination was normal. The previous surgical incision was healing well. Thoracic and abdominal radiographs revealed only changes consistent with her recent abdominal surgery. Trial therapy for esophagitis and possibly pancreatitis included subcutaneous fluids, maropitant, metoclopramide, omeprazole, and sucralfate slurry. However, Adison returned one week later with no improvement.

Regurgitation now occurred >20 times a day and prevented intake of food and water. Significant weight loss, from 1.36 kg to 1.13 kg, was noted. An esophageal stricture was suspected due to the severity of regurgitation, post-procedural onset of clinical signs, and lack of improvement with standard symptomatic care.

Adison was hospitalized overnight and esophagoscopy was performed the following day. A tight esophageal stricture (Figure 2, diameter ~2 mm) was found just in front of the lower esophageal sphincter. Gastroesophageal reflux during her recent anesthesia was suspected as the underlying cause. Endoscopically guided esophageal balloon dilatations were performed (Figure 3) to open her esophagus to 1 cm diameter and permit passage of the endoscope into the stomach. Hemorrhage associated with mucosal injury and expansion of the stricture is common in this procedure (Figure 4). Adison recovered well, was able to eat and maintain her blood glucose post procedure and was discharged on metoclopramide, omeprazole, sucralfate and prednisone as well as instructions to feed a liquid diet 4-6 times a day.

Follow up

One week post procedure, Adison’s regurgitation had decreased from 20 episodes per day to 1 episode per week. But by two weeks post procedure, regurgitation had increased again to 6 episodes per day and Adison therefore underwent a second balloon dilation. To prevent stricture recurrence, triamcinolone 2 mg/kg total was injected circumferentially into the mucosa around the stricture post ballooning using endoscopic guidance. This procedure was repeated again one week later.

Outcome

Adison is now 4 month post pyometra surgery and 2 month post her last balloon dilation. She is doing very well at home with no regurgitation noted, no medications needed and is fed 2-3 times a day living a very normal dog-life. According to her family, she enjoys sleeping in and shopping.
**Review**

In a review of the literature, anesthesia-related gastroesophageal reflux is the underlying cause of esophageal strictures in up to 65% of dogs, with symptoms typically occurring within the first weeks after anesthesia. Prolonged fasting prior to anesthesia as well as patients undergoing intra-abdominal surgery (e.g. ovariohysterectomy) are at increased risk of developing gastroesophageal reflux. Though reflex occurs in 16-17% of anesthetized patients, stricture formation is rare. Perianesthetic administration of prokinetics (e.g. metoclopramide) or antacids (e.g. ranitidine, etc) is not been proven to reduce the incidence of gastroesophageal reflux though such medications may be beneficial in reducing both gastric pH and frequency of gastroesophageal reflux during anesthesia.

Esophageal stricture should be suspected based on clinical signs and confirmed via endoscopy. As with other esophageal disorders, aspiration pneumonia can occur. In our office, most esophageal strictures are the result of esophageal foreign bodies. However, gastroesophageal reflux associated with severe vomiting or general anesthesia may also commonly result in stricture formation. The prognosis for treatment of esophageal strictures is good with response rates around 85%. Repeated dilation procedures are often necessary (average 2-3 balloon dilations needed). Animals with multiple strictures may have a worse prognosis.

---

**A special thank you to Adison’s family and Dr. Armand Coreil with Coreil Veterinary Clinic for their support of our hospital.**

Small animal practice located in the heart of central Louisiana seeking associate veterinarian. Fitzgerald Animal Hospital has provided comprehensive animal care to the citizens of Alexandria, Louisiana for forty years. This full-time/part-time position is available to experienced veterinarians and new graduates alike. Position includes excellent benefits, no emergency, paid CE and competitive salary at an AAHA accredited practice. Interested candidates please contact Dr. Bruce Guilly at 318-445-6428 or bguility@aol.com. Fax resumes to 318-442-8309.

Need a speaker for your local association meeting? Please contact the LSU Office of Veterinary Continuing Education for help scheduling a speaker & selecting a topic. Contact: Paula Jones: 225-578-9825, paulaj@lsu.edu OR Dr. Kirk Ryan: 225-578-9600, kryan@lsu.edu

Fast growing, progressive, AAHA Accredited hospital in Ponchatoula looking for a courtsie, motivated, hard working full time veterinarian. Our hospital is a 5 doctor, paperless practice with computer's in each exam room, digital x-ray, digital tonometer, doppler blood pressure, in-house hematology/chemistry/blood clotting time machines, EKG, video otoscope, dedicated ICU, isolation ward, 4 Heska IV pumps, oxygen cage, advanced surgical monitoring (blood oxygen levels, EKG, body temperature, heart rate, expired CO2, resp. rate and blood pressure). We will be adding ultrasound this year as well. Experience is preferred. Compensation includes base salary plus performance bonuses, 2% IRA contribution, 50% health insurance, CE stipend, dues to AAHA/AAPF/LVMA, DVM license fees. Please email resumes to drjpfarrell@yahoo.com

**Emergency Medicine Veterinarian**

MedVet Medical & Cancer Centers for Pets is seeking an Emergency Medicine Veterinarian to join Louisiana locations. The individual should be team-oriented, have excellent communication skills with colleagues, staff, and the referral community, and be dedicated to practicing the highest quality of emergency medicine and critical care. MedVet is one of the largest veterinarian-owned multispecialty and emergency practices in the country. MedVet New Orleans opened in February 2013 and has experienced significant growth. We are expanding our clinical space to include new triage/examination and procedure areas, and a new ICU/ward. Our facilities contain advanced intensive care units with excellent technical support and monitoring equipment. MedVet’s collaborative approach to patient care provides support to the emergency medicine group by on-site specialties including: critical care, internal medicine, neurology, oncology, rehabilitation, and surgery. Contact or send CV to: Alan G. Ralph, DVM, DACVECC MedVet New Orleans: 504-835-8508 or alan.ralph@medvetforpets.com; David Kergosien, MS, DVM, DACVS, MedVet Mandeville- 985-626-4862, david.kergosien@medvetforpets.com. All inquiries are confidential. www.medvetforpets.com

Newly remodeled, well-established, high quality emergency and critical care clinic in Shreveport, LA looking for motivated, energetic, compassionate veterinarian to join our family oriented team. Part time or full time considered. Our clinic is fully equipped with the latest in-house diagnostics, digital x-ray, ultrasound, and monitoring equipment. Competitive salary that rewards experience, skill, great attitude, and hard work. Please contact the Animal Emergency Clinic, 2421 Line Ave, Shreveport, LA 71104, (318) 227-2345 or email ds@dsmitths.us.

Profexray vintage portable x-ray machine with stand. Recently inspected, fully functional 25mA machine located in Baton Rouge. Make offer. 225-927-7196 or capheightsvet@gmail.com.
