The waters have finally receded and the reconstruction has begun. Everyone in the state has been touched by the flooding either themselves personally or through friends, family or clients. Many of us felt overwhelmed either by being directly affected or by feeling “survivor guilt” for those who suffered such devastation. I think of the words of the ever wise, Ronald Reagan, when he said….. “We can’t help everyone, but every one of us can help someone.”

From the many calls from other State Associations and Organizations, to the volunteer donations of hay, food, and medicine by numerous pharmaceutical and feed companies, to veterinary clinics opening their doors so their flooded colleagues could continue to practice and take care of their clients, to the dedication of neighbors just pulling up their sleeves and stripping wet floors, drywall, etc., this disaster showcased the most important thing that makes Louisiana great, its people!!

Commendation must go out to the entire outstanding LSART Team. Dr. Renee Poirrier, Dr. Martha Littlefield and Dr. Rebecca McConnico commanded a team of students, veterinarians and volunteers who took a mammoth task and organized it into an incredibly well designed and efficient rescue machine. A very special thank you goes to the LSU School of Veterinary Medicine, which was staged as Command Central, and to the Lamar Dixon Expo Center, Celtic Studios and the Baton Rouge River Center for opening their doors and arenas to house hundreds of people and pets that were displaced from this tragedy. It was truly touching to see the number of people who volunteered their time and energy to help so many temporarily homeless people and pets. The human spirit can illicit the greatest charity in the time of the greatest tragedy and this flood was a shining example of that quality.

I have spoken with some of you personally about the Walter J. Ernst Fund and the opportunities offered to veterinarians and their employees whose clinics or homes were affected by the flooding. If you have been affected, you can apply on the LVMA Website for low interest loans and grants. Please take advantage of this opportunity by clicking on the WJE Link on the lower, right hand corner of the front page of the website.

In other news, as we look to the future, it is time to consider nominees for the LVMA AWARDS. Please see your newsletter or visit the LVMA website for application information. I am sure there are many people you know who are very deserving of gratitude and recognition for outstanding work and you may have been thinking, how can they be recognized? Here is the perfect opportunity to give them that recognition.

The LVMA Winter Meeting promises top notch speakers and will be in Baton Rouge this year from January 20th – 22nd. It will be at the Crowne Plaza Hotel in Baton Rouge, so reserve your room early and take advantage of group rates- links are available on the website. Stay tuned to email alerts for registration announcements. Looking forward to seeing you all there!

God Bless,

Trisha C Marullo, DVM
LVMA President

As veterinarians, we are forever searching for ways to improve the level of care and quality of life for our patients. We incessantly seek out better medications, more accurate diagnostics, and design more efficient treatment protocols and surgical procedures. All of this with the best interest of our patients in mind. Our field is constantly evolving, striving to find new and better alternatives to keep our pets happy and healthy. While canine rehabilitation and physical therapy isn’t necessarily new to veterinary medicine, it can be of tremendous benefit to both clinician and patient.

The idea of canine rehabilitation first started to spread among veterinarians in the late 1980’s. Interest and popularity grew over the years with published texts, formal presentations as well as public awareness, interest, and acceptance. Over the years, veterinarians have worked closely with human physicians and physical therapists to develop treatment protocols we commonly use today. Many of the early protocols used in human rehabilitation were initially derived from animal models. This 30+ year collaboration has provided the specialty of canine rehabilitation with a comfortable niche in our field today. Despite its growing popularity, many veterinarians and owners are still unfamiliar with what the advantages and goals of canine rehabilitation are.

Several modalities are being used today. These range from the simplistic application of cold or heat to the more sophisticated use of technology such as therapeutic ultrasound, electrical stimulation, and cold laser therapy. Hydrotherapy is also a widely popular modality and can be done by owners with access to water (pool, beach, etc.) or done in a more controlled setting using an underwater treadmill. The goal of these therapies are ultimately to improve functionality and quality of life of our patients. This is accomplished by reducing swelling and inflammation, decreasing or eliminating pain, increasing limb function, building muscle, and weight reduction to name a few. A psychological benefit from participating in a rehab program can be seen in patients as well. As abilities improve or return following injury we see confidence levels rise. Patients become more engaging and willing to participate in activities and seem happier in general. Owners notice this as well and as a result are happier too and become reassured they have done the right thing for their pet.

The list of potential candidates for rehabilitation are endless. The more common patients seen are those who have suffered some type of injury. Cranial cruciate tears, intervertebral disc disease, patella luxation(s), fracture repairs, etc. are the injuries most likely thought of. These conditions typically will require surgical intervention with rehabilitation to follow. Non-surgical injuries can also be treated and managed through rehabilitation. Ligament and tendon sprains/strains, muscle tears, osteoarthritis, medically managed IVDD, etc. can all be helped in some form through rehab. Overweight or obese patients can also be helped. Through diet modifications and a tailored rehab program these patients can return to a level of activity their owners believed were no longer possible.

Of all the modalities available, the one most seem to enjoy (patients and owners alike) is the underwater treadmill. Underwater treadmill is an excellent way for a patient to exercise in a controlled environment.

Using the principles of water to our advantage we can improve pain, control edema, increase range of motion, and build muscle mass. Buoyancy helps reduce the weight felt by the patient. This reduces the amount of pressure and strain on the muscles and joints allowing for more activity compared to dry land. The hydrostatic pressure of water can aid in alleviating pain and helping reduce edema in tissues and joints. The viscosity of water can provide enough resistance to help maintain muscle mass and in some cases actually build it. By manipulating water height, belt speed, and session length we can make exercise as easy or as challenging as we desire. Patients are typically accepting to this mode of therapy. If there is any anxiety, this usually diminishes after a couple of sessions resulting in a willing participant. Most patients are worked with several times per week throughout their (Continued on page 10)
recovery until it is deemed safe to transition to normal, home activities.

Canine rehabilitation provides us with safe, non-invasive methods to improve health and quality of life. Programs can be developed and tailored to the individual’s needs and capabilities. If developed and followed through properly, canine rehabilitation can be a great alternative or adjunct treatment benefiting all parties involved.

**Dr. Ransom received his veterinary degree from Louisiana State University in 2003. After seeing a real need for rehabilitation services he attended the University of Tennessee and obtained his certification in Canine Rehabilitation in 2009. Dr. Kenneth Ransom is one of only a few veterinarians in the state to be a Certified Canine Rehabilitation Practitioner. To learn more about MedVet’s Rehabilitation services, please call MedVet Mandeville at (985) 626-4862.**
